

In 21st century, due to advancement in science and technology, the amount of pollution is increasing rapidly. Since, people live ~~themselves~~ ^{themselves} so its ~~their~~ ^{an individual} responsibility to keep their surrounding neat and clean ~~so in order~~ to let ~~grow~~ ^{flora and fauna} so that flora and fauna grow freely. Though I feel, it is the duty of an individual ~~by~~ but in my opinion it is also the duty of ~~an~~ government to do so. Since, government has a power to execute it. Considering it is too big to be solved by individual I believe if the government takes the initiatives then people will easily follow it. Since the government has power and people fear from them. So they follow easily their guidelines which includes work force and departments.

Pollution doesn't only mean garbage but a lot of things. Since, it is a very small country ^{with} ~~an~~ respect to population therefore it must be the duty of government to extend their helping hand. Moreover, to maintain pollution free environment a lot work force is required. The different level such as water, land and air which are required to maintain so people from different departments is considered to by the municipal corporation. Even to maintain garbage a lot of financial help is required that only government can afford. However, some people believe that this planet is for next generation but it is very difficult to manage it for different place that's why it is ~~very~~ ^{crucial} important too big problem.

For an individual, only government can help.
To conclude, though environment is the place
for off all the individuals but it is the
duty of the government to manage and
power to maintain it and support it
financially.
