

Health problems are the major ~~go~~ issues seen in many working people as they have to do little or no exercise during the working day or in their free time. It is high time people should perform exercise to ^{maintain their} ~~(have a)~~ good health and as a responsible citizen of the country. There are many reasons as if for not getting enough time for the exercises. It is important for the government to find solutions for this, not only during the working day but also in their leisure. One of the factors ^{that} affect the health of working professional is a target oriented work. People work 24/7 to finish their task without worrying about their ~~the~~ health. Moreover, travelling has now become a biggest challenge for some people specially living in metro cities. Adding the third reason, digital media ~~(is one of the)~~ that consumes majority of the free time of an individual like Facebook, Instagram, Snapchat, etc. ~~(And the last is)~~ Tiredness is another reason after hectic schedule that exhaust people energy and make them lazy.

Corporates should focus on solving this problem because employee are the backbone of the company as well as they contribute a huge in the economic development.

These company can setup gym or ~~ex~~ well equipped exercising area and must allot a proper time for exercises. It will help company to have more productivity.

Moreover, government should ensure a fix working hours for working professions and setup a open space ~~for~~ exercises.

Because they are the people responsible for ^{economic} ~~the~~ growth of the country.

People should be healthy for the sake of economic growth and stable family. ~~and~~ Also next generation to have a healthy life.

To conclude, I would ~~like to~~ like to emphasize the travelling and digital media which affect the high time of any working professional.
