

Employment is necessary to have a comfortable life. Unlike, there is a trend people today like to ~~have~~ be self-employed rather than to work for a company or organization. This outlook for the people which also have ~~has~~ a negative impact. There are many reasons and disadvantages. Some reasons are they can work according to their time and can have a good balance between the family and worklife. Moreover, most of the jobs are target based and full of stress. Another reason being

as well as government most of the parents support individual enterprise business. Hence, these things aren't possible when someone is working in corporate or IT. People working for themselves can attend family function or go on a vacation without bothering about the work load. Also, it gives change to innovative ideas. Today, youth are getting more information through digital platform easily and are not ashamed to try new things because they ~~know~~ knew they can achieve the target.

On the other hand, starting an enterprise is not a bed of roses. It requires full dedication as well as time to run it successfully. Initially, they don't have fixed income and high initial capital which only few can afford. Today due to ^{high competition} ~~large~~ number of innovation there is a chance that the new product become outdated shortly after it released. Atleast for 2-3 years, ^{initially} there may be no work life balance and lack of loyalty is also one of the major factors. Advertisement play a vital role in making a product successful in short period and also gain popularity as well as trust.

To conclude, today's youth are more innovative and these innovation can majorly contribute to country's economy as well as betterment of their ownself society.
